MOVING LANGUAGES

Mobile Virtual Learning for Languages

Erasmus+

MOVING LANGUAGES
Migration in the EU is on the rise against the backdrop of troubled political situations of certain countries in the Middle East, Africa and Asia. For this reason, it is crucial to provide additional tools to help the integration of migrants and refugees arriving in Europe. Language learning is one of the key priorities of successful integration. Mobile applications are an effective educational source specifically for migrants, as most are digitally literate and are looking for new opportunities in their new countries online.

Target group
- migrants and refugees
- foreigners in each partner country
- stakeholders working in the field of migration
- migrant associations
- language learning organisations

9 Products
- Report on migration statistics and languages spoken in each partner country
- Report on the available language applications for adults in each partner language
- Pilot testing report and 6 smartphone apps one for each of the partner countries (the apps will be a gamified language learning solution delivered in both IOS and Android).

Applications will be available in 6 target language versions (English, Spanish, Italian, German, Swedish and Finnish) and will have over 25 support languages each - the languages most widely spoken by the immigrants in each of the partner countries.

The language content of the mobile applications covers the topics that are essential during the first stages of living in the new country. The application includes over 5,000 vocabulary, grammar, and culture items illustrated by some 3,500 images for easy concept recognition. The vocabulary in this application also contains topics with selected partner country-specific concepts. Phrases, dialogues and audio versions of selected material are also available.
